Subject: TPC Information potholes

Good morning Jason et al,

I understand that everyone is busy and heavily engaged in this response. As indicated a few times since the incident occurred, there's some information that isn't getting reported daily to the Unified Command (neither verbally nor in a document).

So, here's an example of why we requested an executive summary about four days ago, and daily since. You can call this document whatever you wish, but the point of it is to get all the information to all agencies of the Unified Command. You can build on a current document rather than creating a new document. Whatever you need to do to get the information from TPC to the members of Unified Command daily, needs to be implemented.

This morning, I received a preliminary air monitoring report for TPC air monitoring over the last operational period. I searched my mailbox and found that I've received five of these (dated 11/29, 12/03, 12/05, 12/06, and 12/08) since the incident began 13 days ago. Waste accumulation information isn't provided daily.

Two factors of any response that inhibit a successful response are communication and information sharing. I expect that beginning on 12/09/19, EPA and members of the Unified Command will be provided a daily document that does not have any information potholes in it.

VR,
Adam
